

# A Smart, Affordable Path to Actionable, Value-Based Care

## NextGen HQM Action Pack

The NextGen HQM Action Pack is designed for small to mid-sized primary care practices, multi-specialty practices, and FQHCs who want to jumpstart their journey toward comprehensive value-based care. The solution uses the analytic tools of NextGen® HQM to create patient cohort lists. The lists are then imported into NextGen Care® so that care providers can take clinical action at the point of care within NextGen® Enterprise EHR. This low-cost, value-based care package is one of many benefits of turning on the full suite of NextGen Healthcare integrated tools.

## Solutions Overview

### NextGen HQM

If you use NextGen Enterprise EHR, you probably already have access to NextGen HQM, although your practice may not be using it to its full potential. As a reminder, here are a few benefits of our health quality measures module:

- No additional charges for basic reporting
- View performance online or generate reports in multiple formats for export
- View actionable data at the point of care to close reporting gaps
- Get a jump on tracking quality measures with the most current logic updates by using the UDS Trending Program
- Access other quality programs and measures which can be leveraged for many state and local reporting and grant programs
- Prove the value of care you deliver to payers and stakeholders

### NextGen Care

NextGen Care is comprised of two population health management components: a hub for inactive population cohort management and an automated patient engagement outreach engine. Benefits include:

- Identification of high-risk or disease-based groups that should be targeted for care
- Facilitation of quick action by care managers who can place bulk orders or schedule future appointments
- Different automated channels to remind, alert, and engage patients
- Automation of proactive patient outreach for preventive and follow-up care

## NextGen HQM Action Pack

When you pair these two solutions, you're equipped with easy-to-use outreach and actionability tools that integrate seamlessly. **The combination of NextGen Care with NextGen HQM (as a data source) provides a smart and affordable option for those who aren't currently seeking a broad population health management solution but want to level-up their value-based care and patient cohort management capabilities.** Enhance your ability to improve quality outcomes across the patient panel. Participate successfully in value-based reimbursement or enhanced fee-for-service payment models. As an added bonus, when you activate the NextGen HQM Action Pack, training is included.

### NextGen HQM Pack helps you:

- Reduce no-shows which can significantly increase revenue
- Save practice resources by automating manual processes
- Automate importing of customizable patient cohort data
- Report within HQM to drive specific quality measure reporting timeframes
- Optimize advanced payment models and UDS+ reporting
- Advance business intelligence
- Send online outreach messages, emails, texts, letters, etc.
- Put chart alerts on selected patients
- Get an easy-to-read view of patient history
- Streamline and automate pre-visit planning
