

Christopher A. Cefalu, MD, Transforms Workflows and Restores Work-Life Balance with NextGen Ambient Assist

THE CHALLENGE

Christopher A. Cefalu, MD is a board-certified urologist with Urology Clinics of North Texas. For a long time, burnout has been a major issue for Dr. Cefalu and his colleagues. Physicians feel that they spend a small amount of time seeing patients compared to the time spent documenting and billing.

Dr. Cefalu used to go back and forth between typing and dictating. “I hated dictating because at the end of the day after seeing so many patients my voice gets tired and having to say it over again wore on me to be honest, so most of the time I would just sit down and type.” It was far from an ideal situation.

Many physicians have transitioned to using scribes, but not everyone can afford a scribe, and staffing is a real challenge. Luckily, Dr. Cefalu quickly found that artificial intelligence (AI) could do that for him. Dr. Cefalu has been interested in AI’s role in improving documentation and workflow for several years.

When Dr. Cefalu heard that NextGen Healthcare was releasing NextGen Ambient Assist, he jumped on as a volunteer to test it. “Almost immediately after the first few test runs, I realized that it would be a huge asset to my day-to-day practice,” said Dr. Cefalu. “I’ve been using it pretty much nonstop now for two months with almost every patient I see.”

THE SOLUTION

Ambient Assist is an AI-powered mobile documentation solution that can generate a structured SOAP note in seconds by listening to the natural, patient/provider conversation. This note can be reviewed and edited by the provider, and then instantly sent to the patient’s chart in the EHR.

It has proven to be a substantial time-saver for Dr. Cefalu’s practice. “It has taken the burden of sitting at a computer for five, ten minutes after each patient and documenting that encounter to spending maybe 15 to 20 seconds to put in a diagnosis and a charge,” said Dr. Cefalu.

Dr. Cefalu describes his new workflow after he uses the app to listen to a typical visit: “I’ll walk out of the room, I’ll let Ambient Assist start to generate the note, and by the time I walk up to my receptionist and give them the follow-up plans for the patient the note is ready.” Then, Dr. Cefalu said, “I hit ‘Send to EHR,’ and by the time I get back to my computer, it’s there. I put in my diagnosis, my charges, and move on to the next patient within 30 seconds.”

CLIENT PROFILE

Urology Clinics of North Texas

Background: Urology Clinics of North Texas is the premier name in urologic treatment in the Dallas-Fort Worth metro area. Initially formed in 1999, Urology Clinics of North Texas delivers state-of-the-art care to patients at 21 locations throughout the North Texas area.

NEXTGEN HEALTHCARE SOLUTIONS

- NextGen® Ambient Assist
- NextGen® Enterprise EHR
- NextGen® Mobile

HIGHLIGHTS

No longer **typing notes** by hand

Uses Ambient Assist for almost **every patient**

From minutes of documentation per encounter to **seconds**

This is a remarkable difference from his days of rushing to hand-type each note. It is more efficient, quicker, and intuitive for his day-to-day schedule. Previously, with his packed days, he often had to wait to complete his notes. Naturally, details can get left out and memory strain takes a toll. “I think Ambient Assist is going to improve accuracy of documentation because we’re not going to have the delay in completing our documentation,” said Dr. Cefalu. Why wait to document when it only takes seconds?

Dr. Cefalu notes that he could add on more patients each day thanks to Ambient Assist, but chooses not to because he likes the workflow, wants to focus on patient care, and appreciates the better work-life balance.

“Indirectly, it’s improving care because it gives me more time with the patient,” said Dr. Cefalu. “Sometimes we feel rushed with patients because we’ve got so much to do and only so much time, but over the past few months, I’ve been less rushed.” Dr. Cefalu even said that this additional time each day has allowed some patients to talk about an additional problem that they weren’t necessarily there for. Fostering patient loyalty and comfort is paramount to all practices, as is determining the whole picture of health.

Security is also important to Dr. Cefalu and Urology Clinics of North Texas. “The big one is that Ambient Assist does not save any of the data. It’s completely HIPAA-compliant,” says Dr. Cefalu. He compares Ambient Assist directly to having a scribe in the room and trusts it just as much.

Ambient Assist has already transformed Dr. Cefalu’s workflow for the better, in a matter of weeks. He looks forward to using it more, and he encourages his peers to give the technology a shot. “I wouldn’t see limitations for any specialty,” said Dr. Cefalu. “Everybody that’s going in, seeing a patient, and doing documentation afterward: this will help you.”

“Indirectly, it’s improving care because it gives me more time with the patient. Sometimes we feel rushed with patients because we’ve got so much to do and only so much time, but over the past few months, I’ve been less rushed.”
