

CARE COORDINATION

Leverage data analytics to provide enhanced, holistic patient care

Solution description

NextGen® Population Health solutions let you quickly move from a population view to a patient view. They augment your practice data with claims and sociodemographic data to help you identify resource utilization and opportunities for cost savings—diverting saved dollars to critical healthcare services. Care teams using our solution are informed by data, delivering high-quality care to serve the chronically ill and proactively manage chronic diseases in high-risk patients at lower costs.

What this solution enables

Our population health management software is vendor agnostic and provides a single source of truth of aggregated data. Leverage paid-claims data analytics and a nearly real-time care transitions dashboard. Gain easy-to-aggregate data from a variety of sources, normalize this data, analyze it, and extract meaningful insights. Risk stratify your population more precisely, improve quality metric fulfillment through the capture of services rendered outside the EHR, and facilitate assigning care management resources to patients during care transitions.

Impact

What does this mean for your practice?

- Achievement of gainsharing-benchmark targets and quality-measure incentives under value-based payment arrangements.
- Predict and manage patient care and identify care gaps for intervention
- More efficiently leverage health IT to improve ROI for success in the new payment programs
- Improve pre-visit planning and automate proactive patient reminders
- Enhance collaboration across the extended care team
- Participate effectively in value-based reimbursement models
- Meet patient-centered medical home objectives

“The doctors are bought in and the supervisors are excited to have actionable data...This has vastly improved our quality metric reporting.”

Leslie Zeck, EHR Quality Manager
Ohio Medical Group/Northern Ohio Heart
